ISTRUZIONI - INSTRUCTIONS - EINSTELLANLEITUNGEN
INSTRUCTIONS - INSTRUCCIONES

SAFETY INSTRUCTIONS

- Only professional technicians must perform installation, complying with all safety instructions, especially those regarding electrical connections.
- To avoid short circuits, arrange an automatic bipolar switch with opening distance of the contacts of at least 3 mm before the circuit.
- If not used, the white wire must be insulated. It is dangerous to touch the white wire when the receiver is powered.

TECHNICAL FEATURES

- Power Supply 220 Vac
- Power Consumption 0,5 W
- Radio Frequency 433,92 MHz
- Decoder System Rolling code
- Modulation AM/ASK
- Max number storable transmitters 15
- Max loads power 2000 W halogen lamps and heaters
500 W LED and fluorescent lamps
- Operating temperature -10°C +70°C
- Dimensions 120 x 35 x 20 mm
- Weight 60 g
- Protection Degree IP44

FUNCTION OPEN/CLOSE PROGRAMMING

REMOTE CONTROL SKIPPER PLUS - SKIPPER LUX - SKIPPER P-LUX

REMOTE CONTROL POP PLUS - POP LUX - POP P-LUX

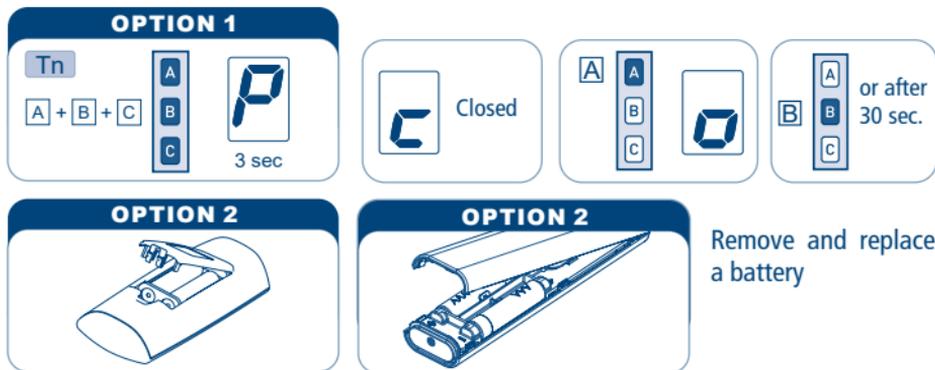

To prevent accidental changes to the programming of the motor during the daily use of the remote control, the possibility of programming is disabled automatically 8 hours after sending the last sequence (A+B or B+C).

CHECKING THE STATUS OF THE FUNCTION

To change the status of the function, see the sequences "ENABLE/DISABLE PROGRAMMING".

ENABLE PROGRAMMING

Proceed with programming as the instructions booklet.

DISABLE PROGRAMMING

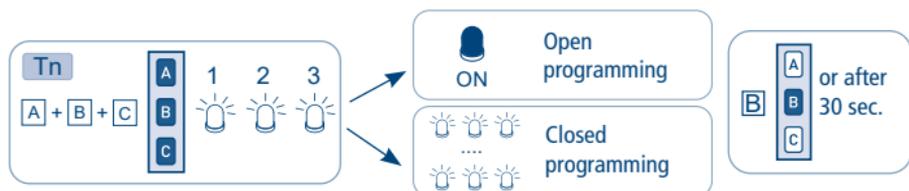

FUNCTION OPEN/CLOSE PROGRAMMING

REMOTE CONTROL SKIPPER - SERIES GIRO - REMOTE CONTROL POP

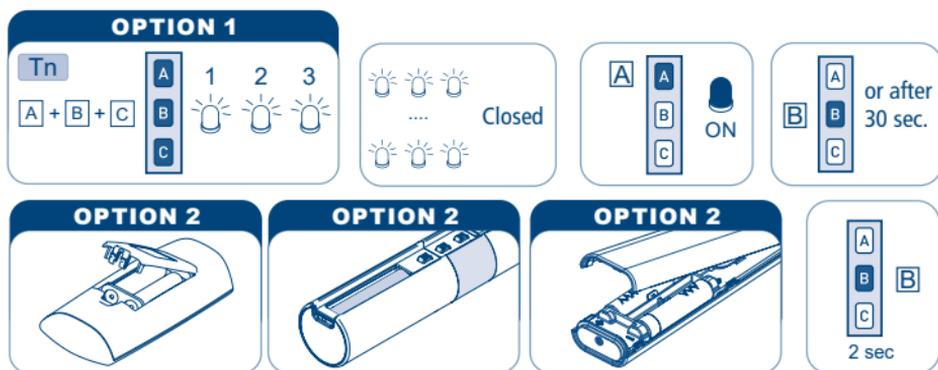

To prevent accidental changes to the programming of the motor during the daily use of the remote control, the possibility of programming is disabled automatically 8 hours after sending the last sequence (A+B or B+C).

CHECKING THE STATUS OF THE FUNCTION

To change the status of the function, see the sequences "ENABLE/DISABLE PROGRAMMING".

ENABLE PROGRAMMING

Remove one battery and wait minimum 5 seconds or press any button.

Proceed with programming as the instructions booklet.

DISABLE PROGRAMMING

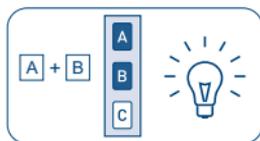

PROGRAMMING USING SKIPPER, GIRO OR POP REMOTE CONTROLS

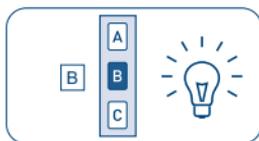

SETTING THE FIRST REMOTE CONTROL

This operation can only be performed when the receiver is new, or after a total delete of the memory.

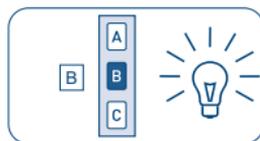

T1: First remote control to be set

T1 short

T1 short

T1 (2 sec) long

AUTOMATIC DISABLING OF THE FIRST REMOTE CONTROL SETTING FUNCTION

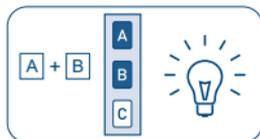

Every time you connect the control unit you have 3 hours to store the first remote control. After this time, the ability to store the remote control is disabled. To reset the timer of the function you have to disconnect and reconnect the control unit.

SETTING OF ADDITIONAL REMOTE CONTROLS

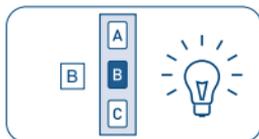

Up to 15 remote controls can be set.

Tn: Already programmed remote control

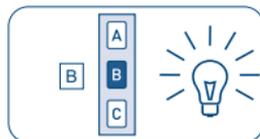

Tx: Additional remote control

Tn short

Tn short

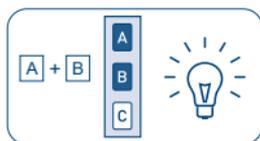

Tx (2 sec) long

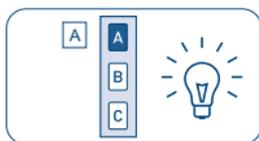

REMOTE CONTROL MEMORY CLEARING

It is possible to delete each memorized remote control individually. As the last one is deleted the receiver initial condition is restored. The same applies to the single channels of a multichannel remote control: just select the channel to cancel.

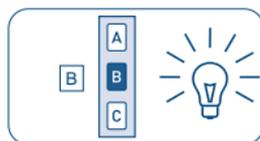

Tn: Remote control to be cleared

Tn short

Tn short

Tn (2 sec) long

This sequence deletes the remote control from all the associated receivers.

A530058 REMOTE CONTROL WITH 4 INDEPENDENT CHANNELS

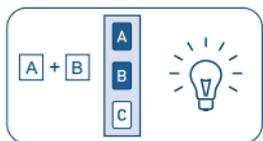

PROGRAMMING FROM ANOTHER REMOTE CONTROL

The A530058 remote control may be set using another remote control that has already been programmed.

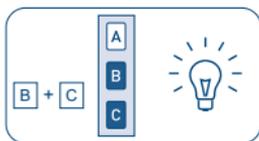

- Press the A and B buttons at the same time.
- Device will be powered shortly.
- Then press the B and C buttons at the same time.
- Device will be powered shortly.
- Then, press the desired button on the A530058 remote control for at least 2 seconds.
- Device will be powered for longest time.

Tn: Already programmed remote control

Tx: Additional remote control

Tn short

Tn short

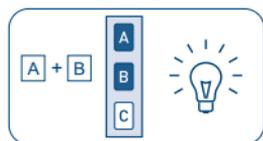

Tx (2 sec) long

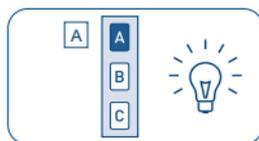

SINGLE CHANNEL MEMORY CLEARING

It is possible to delete each memorized channel individually by selecting the channel to be deleted during the last step of the following sequence. To delete all channels repeat the sequence as many times as necessary.

Tn: Already programmed remote control

Tn short

Tn short

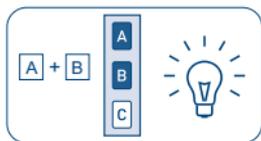

Tn (2 sec) long

FULL MEMORY CLEARING

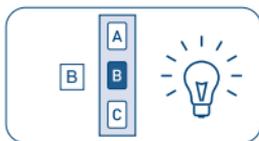

The full memory clearing can be performed in two ways:

1) WITH THE REMOTE CONTROL

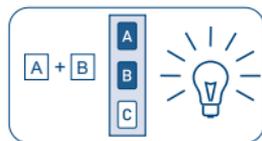

Tn: Already programmed remote control

Tn short

Tn short

Tn (4 sec) long

2) WITH THE WHITE WIRE

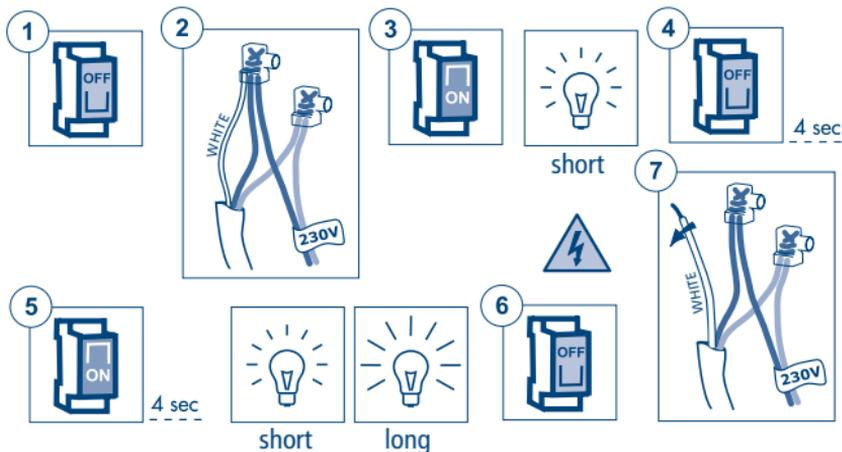

Do this operation only in case of emergency, if all remote controls are no longer operating.

To delete the memory we have to access the white wire of the control unit.

The sequence of this operation is the following:

- 1) Disconnect the power supply from the control unit, via the main switch for example.
- 2) Connect the white wire to the brown wire (phase) or to the blue wire (neutral).
- 3) Connect the power supply to the control unit to power shortly the device.
- 4) Disconnect the power supply from the control unit for at least 4 seconds.
- 5) Connect the control unit to the power supply: after around 4 seconds to power shortly the device and then for longest time.
- 6) Disconnect the power supply from the control unit.
- 7) Separate the white wire from the brown/blue wire. Insulate the white wire, in an appropriate way, before reconnecting the power supply.

At this point it is possible to proceed with the setting of the first remote control.

ON/OFF CONTROLS

Skipper Series or POP Series remote controls

- Button A (Up) closes the contact (turns on the output).
- Button C (Down) opens the contact (turns off the output).
- Each time button B (Stop) is pressed, the contact switches in sequence between open and closed.

Giro Series remote controls

- The switch UP closes the contact (turns on the output).
- The switch DOWN opens the contact (turns off the output).
- Each time button STOP is pressed, the contact switches in sequence between open and closed.

A530058 Remote Control with 4 independent channels

Each time the programmed button is pressed, the contact switches in sequence between open and closed.

Button or switch connected to the wired switch

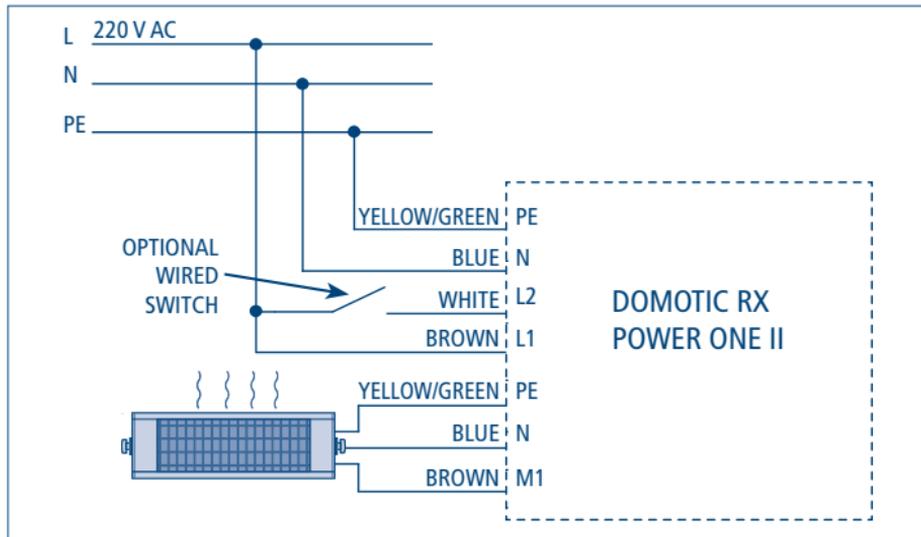

Each time the button is contact switches in sequence between open and closed.

- **UNSTABLE PUSH BUTTON** (if the contact lasts less than 1 second): the command is given only when the contact is closed.
- **STABLE SWITCH** (if the contact lasts more than 1 second): the command is given both when the contact is closed or when it is opened.

NOTES: In case of power failure, when power is restored the output remains off, independently of its former status.

DOMOTIC RX WIRING DIAGRAM

TIMED AND IMPULSE CONTROLS

The factory settings maintain the outputs active when the receiver is turned on until the off command is given, or until the power is disconnected.

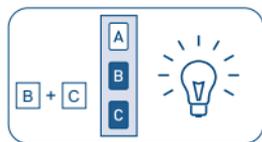

It is possible to set the activation of the output in either timed or impulse mode.

Timed activation: for example, is useful to control stairway lights or other equipment for a limited time (factory setting or user setting). With each wired or remote command to turn the receiver on, the relative output will be activated for a programmed time and then will shut off. Shut off may be anticipated with a new command.

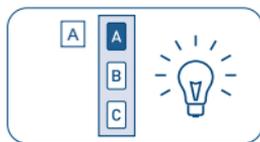

Impulse activation: other types of applications may require activation of the outputs by impulse, only for the duration of the command.

TIMED AND IMPULSE SETTINGS

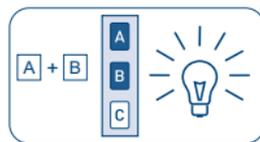

TIMED OUTPUT ACTIVATION WITH DURATION SET AT 5 MIN.

short

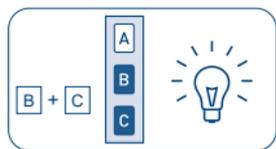

short

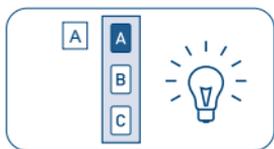

2 sec long

TIMED OUTPUT ACTIVATION WITH PROGRAMMABLE DURATION

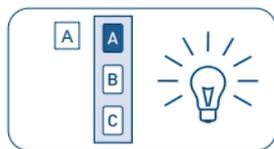

(1 sec = 1 sec)

short

short

2 sec long

After a long blinking, the output comes on and the measurement of the timing duration begins. Once the duration desired is reached press B to program. The output goes off and the Led blinks short-short-long.

breve

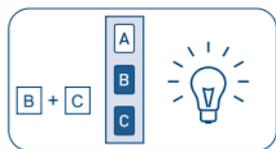

breve

2 sec long

SPECIAL FUNCTION: SHORT-TERM SETTING OF A REMOTE CONTROL

This function makes it possible to store a remote control temporarily. A later final saving of the remote control will be possible using the appropriate command sequence (see: "SETTING THE FIRST REMOTE CONTROL"). The operations described below can be carried out only when the receiver has just come out of the factory or after a full memory clearing (see: "FULL MEMORY CLEARING"). The receiver makes the following operations possible only within the time limits described in order to make sure that the short-term setting is used only in the installation or factory setting phase and not during daily use. Power up the receiver, make sure that no other receivers having an empty memory are powered up in the same operating range.

Within 30 seconds after start, press the B and C buttons simultaneously until the motor gives a confirmation signal.

The remote control will remain stored for 5 minutes, while the receiver is powered up. After 5 minutes or when the receiver has its power cut off, the remote control will be cancelled.

T1: First remote control to be set
